

COG eRetail

ENTERPRISE RESOURCES PLANNING SYSTEM

An easy to use, comprehensive, feature rich application that can address the business needs of small & medium enterprises for Financial, Warehousing and Distribution Management operations along with CRM, Human Resource & Payroll.

*"A software solution that goes beyond
just accounting & book-keeping
and automates the entire business process
from production to sales to
customer management."*

Growing beyond accounting software

Why you need an ERP Solution.

Global competition is a reality in today's business environment, no matter how large or small your enterprise. So is the need for businesses to streamline their process models and implement the right set of technologies to hone their competitive edge and maximize market opportunities. Improving the quality of your products and services and maximizing your profitability in the face of increasing competition are critical to your overall success.

Almost every business recognizes the importance of Information Technology and Automation as the logical solution to addressing many of the arising challenges. Most business start by getting an off-the-shelf accounting software or a CRM package. But as the business grows, these software fail to keep pace with an expanding business and its growing demands.

In such a scenario, businesses need to look beyond accounting software and invest in an **Enterprise Resources Planning (ERP) solution**. A good ERP solution can help you bring together different aspects of your business such as operations, data, documents and people, facilitating seamless cross-functional integration and improving efficiency while reducing costs and mitigating risks.

An integrated ERP system makes vital information accessible at your finger tips, helping you gain real-time insight into business performance, and gives you a competitive edge. It also helps you manage multiple lines of business or multi-site locations and scale operations to support new business.

Identifying the correct ERP software package and a good implementation partner ensures that you get a solution that is best suited for your company's growing requirements.

COG ERP - The better option.

Implementing an ERP system can be a game changer for your organization. Identifying the correct ERP software package and a good implementation partner plays a pivotal role in ensuring that you get a solution that is best suited for your company's growing requirements.

The requirements of different industries and types of businesses are different. It is only by virtue of an ERP consultant that a firm can be assured that their requirements are properly communicated, evaluated and verify the best being delivered, based on their experiences. We give this consultative approach to our end customers, ensuring that we, and you understand the particular business needs and together chose the best option suitable.

COG eRetail - Enterprise Resources Planning System was developed, after extensive research, from the ground up to be an easy to use, comprehensive, feature rich, cloud based application that can address the business needs of small and medium enterprises for Financial, Warehousing and Distribution Management operations.

COG eRetail helps you reduce infrastructure, hardware, and IT management costs, simplify operations, help increase sales and productivity. Its scalable and can meet the needs of a growing organization.

Looking at the limited & pricier options available in market today, COG eRetail is by far the best ERP system for your business as it gives you great value for your money and better customization and implementation options.

COG eRETAIL ADVANTAGES

Ease of Usability

We have heard and taken into consideration each and every user's ideas, up and down the organizational chain, irrespective of the position of an employee, which has helped us design and develop a product that is user-friendly, allows seamless integration and simplifies operations for the end users.

Flexibility

An ERP system needs to be thought of as a long term investment that will play a key role in helping your company achieve business goals. COG eRetail assures that you are investing in a versatile application flexible enough to fit with your existing process and also scalable for future growth plans.

Security Features

Get robust security, plus backup and privacy controls. Your ERP system is going to be the information nerve center of your company. COG eRetail allow you to restrict access to the different sections of this information to authorized users only and helps to protect your business data.

Customization

Large corporates & top-notch names may have a robust solution, but they provide you only off-the-shelf products. We on the other hand provide you the same set of features, with more customization options to fit your business needs and allowing you the freedom of continuing with your established way of running your business

Full-function Trial Version

Unlike other companies that give restricted modules in their trial version, what sets us apart is a fully functional trial version for users giving them a complete overview to experience real time interface & challenges, thus also facilitating a quick and easy purchase decision.
